

PST Training for Large Groups of Clinicians

OVERVIEW: This certification plan is a combination of role-play, audio tape review and post certification supervision for small groups of clinicians. The components are:

1. 3-day workshop:

A PST expert will lead a 3-day workshop that will include didactics in PST and 2.5 days of case-based training in the delivery of PST.

TOTAL HOURS: 18

2. Implementation review:

The PST expert will review three PST sessions per clinician via audio-tape of an actual patient: she will review a first PST session, a follow up session and a termination session for each clinician. Each clinician will be given 30 minutes of telephone feedback per tape reviewed. This review will be crucial for final certification. Audio tape review will be completed within 3 months, depending on clinician ability to identify cases willing to be audio taped.

TOTAL HOURS: 9

WE DO NOT GUARENTEE CERTIFICATION. Certification is based on clinician ability to implement PST with actual patients according to a set standard we hold for all clinicians. We do everything we can to help clinicians reach certification, and based on our experience, most clinicians certify in PST.

Once certified, all clinicians certified receive a certificate and will have free access to the PST network site.
